

DINO-FACTS

DINOSAURS LIVED ON EARTH FOR ABOUT 160 MILLION YEARS

WHICH IS ABOUT 64 TIMES LONGER THAN PEOPLE HAVE BEEN AROUND!

Earth looked a bit different when they were around!

PARASAUROLOPHUS

Parasaurolophus – like Quack – had a large crest on its head to help it identify males and females, and to regulate its body temperature – the male's crest was up to 1.8m long. The crests made a bellowing sound.

1,000

The hadrosaur is the dinosaur with the most teeth – with 1,000 of them!

SPINOSAURUS

Spinosaurus – like Thunderfoot – was the largest meat-eating dinosaur that's been discovered, at around 15m long. It spent a lot of its time in water.

PACHYCEPHALOSAUR

Pachycephalosaurs had thick, rounded domes of bone on their head that they used to heat-butt rivals in fights over mates or territories.

T-REX

Tyrannosaurus Rex – like Biscuit – had the strongest bite of any living animal.. It's powerful jaw would have been able to bite into a car.

VELOCIRAPTOR

The Velociraptor – like Blitz – was the swiftest carnivore at large in the sand dunes of the ancient Gobi Desert.

20x

The heaviest dinosaur – Argentinosaurus, weighed the same as 20 elephants!

COMPSOGNATHUS

Compsognathus was among the smallest and fastest dinosaurs. About the size of a chicken, these feathered friends were covered in a duck-like down.

ANKYLOSAURUS

Ankylosaurus was one of the last dinosaurs remaining before the meteorite strike that caused their extinction around 66 million years ago.

TRICERATOPS

Triceratops had over 100 teeth, which it replaced several times over its lifetime.

STEGOSAURUS

Although the Stegosaurus' body was large – around 9m long, 4m tall and weighing 5 tons – its brain was the size of a lime.

BRONTOSAURUS

Brontosaurus – like Clover – had a lifespan of between 60 – 70 years.
